

In order to analyze the advantages and sustainability of the three-dimensional planting structure clearly and objectively, we compared with traditional pattern in pastoral area ...

Access to electricity is a key indicator of a country's development. In developing nations like Ethiopia, this metric is particularly crucial for assessing progress. Currently, about ...

Microgrids, denoting small-scale and self-sustaining grids, constitute a pivotal component in future power systems with a high penetration of renewable generators. The inherent uncertainty tied to ...

By mosaicking the estimated rasters of a typical steppe and meadow steppe, we finally obtained the carbon stock spatial distribution of Chenbarhu Banner (Figure 3). In general, the carbon stocks...
