

What is a container energy storage system?

The container energy storage system includes batteries, a battery management system, a power conversion system, and an energy management system. The battery management system monitors and manages the batteries storing electric energy.

What is a new energy cooperation framework for energy storage and prosumers?

A novel energy cooperation framework for energy storage and prosumers is proposed. A bi-level energy trading model considering the network constraints is presented. A profit-sharing mechanism is designed with the asymmetric Nash bargaining model. The adaptive alternating direction method of multipliers is applied efficiently.

How do energy transportation operators manage marine mobile energy storage systems?

Firstly, an energy transportation operator is defined to manage marine mobile energy storage systems and trade with island microgrids. Secondly, a bi-layer energy trading problem is modeled via the analytical target cascading method.

How does the energy cooperation platform work?

The energy cooperation platform only reports the equivalent load p_i to DSO. In the upper level, DSO checks the network operation according to the optimal power profiles from the lower level.

Can marine mobile energy storage systems help multi-island microgrids achieve energy sharing?

This paper first proposes a novel energy cooperation framework for multi-island microgrids based on marine mobile energy storage systems to realize energy sharing. Firstly, an energy transportation operator is defined to manage marine mobile energy storage systems and trade with island microgrids.

How can a new energy cooperation framework improve the energy economy?

Therefore, the main contributions of this paper are summarized below: A novel energy cooperation framework for CESSs and prosumers is proposed with an energy cooperation platform as an intermediary, improving the energy economy and solution efficiency.
