How will mini-grids impact energy access?

The International Energy Agency estimates that to achieve universal access to electricity by 2030, 40 percent of all installed capacity will have to come from mini-grids. This toolkit explores several topics relevant to implementing mini-grids for energy access.

What is the community microgrid assistance partnership?

"Through the Community Microgrid Assistance Partnership, DOE plans to work closely with rural and Tribal communities to develop microgrid technologies that will lead to more reliable, affordable energy in isolated regions," said Dr. Geri Richmond, DOE Under Secretary for Science and Innovation.

What is a networked microgrid?

Networked microgrids consist of several separate distributed energy resources (DERs) or microgrids connected to the same utility grid circuit segment and serve a wide area. These are usually managed by SCADA systems.

Do micro- and small enterprises have a grid connection in North India?

Micro- and small enterprise surveys from rural North India are analysed (N = 2,004). 34% of MSEs have no grid connection, despite complete village electrification. Variation in grid reliability did not explain connection rates nor low consumption. Electricity policy reform targeting productive use must consider wealth constraints.

What is a microgrid project?

This initiative is designed to assist remote, rural, and electrically isolated communities in developing resilient microgrid systems that enhance energy reliability and security, particularly in historically underserved and/or Indigenous areas.

Why do we need microgrids?

Microgrids sit at the centre of the clean and renewable energy movement. They strengthen the traditional grid and play a key role in ensuring that disturbances in the grid do not impact the continuity of power to the local load. These smaller grids help pave the way toward cleaner, dependable and secure sources of energy.
