How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.

Can I install solar panels myself?

You can install solar panels on your home yourself. You will need some electrical wiring experience, and we suggest that you also use a professional solar contractor or electrician to do the wiring and connection processes to ensure that you: Do not start an electrical fire that damages or destroys your home, solar array, and solar components.

Can a solar panel system be installed off the grid?

While installing an off-grid solar panel system and avoiding the interconnection process entirely is possible, it's often not cost-effective. For the average residential property, going "off the grid" with solar power requires several solar batteries to store energy.

Do I need an electrician to install solar panels?

You'll still need professional assistance, including a licensed electrician, to properly install your panels. We recommend using a certified solar installation company to ensure a safe and proper installation. For a visual walk-through of what goes into installing solar panels, check out the video below.

Do utility companies let solar panels connect to the grid?

Utility companies won't just let any solar energy system connect to their grid; they need to ensure that your solar energy system meets necessary electrical safety standards. They'll also ensure that your solar panel system will meet their respective net metering guidelines.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.
