

How to build a house under photovoltaic panels

Should you buy a home with solar panels?

A home with solar panels has lower electricity bills than an equivalent home without solar panels. Over the life of the solar system, the savings exceed the higher up-front price of the home. Homebuilders can share information with consumers about financing options and incentives described in the Homeowner's Guide to Going Solar.

Can you install solar panels on your own?

It's possible to install solar panels on your own, but DIY solar installation requires serious know-how and tools. Some solar companies design solar panel kits targeted toward DIYers. However, these kits are often meant for small builds, such as converting a shed, RV, or boat. Installing a solar energy system requires knowledge of electrician work.

How do I choose a home that is solar ready?

When designing a home that is solar ready, pay attention to: Steepness and orientation of your roof. A south-facing roof that is angled between 30 and 45 degrees is the most ideal for solar. The layout of roof vents, chimneys, dormers, etc. Will any of these things cause shading on your solar panels during the day?

How do I choose the right solar panels for my project?

A solar panel manufacturer can help you with your selection, but hiring an installer is the best way to ensure you get the right panels for your project. Racks and roof mounts to place your solar panels on and an inverter to convert solar energy into alternating current may also be necessary.

Should a solar energy system be a part of your home design?

While your solar energy system doesn't need to be at the center of all your home design decisions, anticipating and eliminating potential issues at the time of construction is a lot easier (and more cost effective) than trying to work around them later.

Should you build your own solar panel?

In addition to environmental and educational advantages, constructing your own solar panel can lead to substantial cost savings. While the initial investment in materials is required, the long-term benefits include reduced electricity bills and potential incentives from renewable energy programs.

General guidelines recommend a setup that generates 1 kilowatt per 1,000 square feet (93 square meters) of house. But don't let your optimism take over -- you need to ensure you can produce enough power to ...

Optimized Orientation and Positioning of Panels: It's common to install solar panels on the roof of a house. Still, chances are, your house wasn't built with optimizing the angle and orientation of solar panels in mind.
