

# How to open the photovoltaic panel automatic door

How to install a photovoltaic panel?

You can also use a piece of Lego. Cut a micro usb wire and weld it to the photovoltaic panel in order to have a wire long enough for your needs. Place the photovoltaic panel in a sunny place so that it cannot move. Connect the photovoltaic panel cable to the power bank. In this way the battery life will be unlimited.

Do automatic doors work off of a clock?

There are a lot of automatic doors available that work off of a clock or photo sensor, but not many that work off of a schedule from your phone and even fewer that notify you when the door closed, opened, or won't respond. Not only that, but you can get the status on the door and manually close it from anywhere in the world.

How do I use the power cord on my door?

Just cut the black square off the end of the cord and strip the cord ends to directly wire the power cord to your DC power timer or battery. Using a Power Adapter will drain your battery very quickly. As mentioned previously the door only operates 2 times per day and uses almost no electricity throughout the day.

Make sure to connect the battery first, followed by the solar panel and then the antenna (load). All you have to do is set the time on the timer and then enter the times that you'd like the door to open and close.

If you are wanting to power your Automatic Chicken Coop Door alone, the necessary parts are a 12V deep cycle battery, and a 5 watt solar panel (5 watt will be more than enough to power your door). Total cost for this would be around ...

? QUICK INSTALLATION : Install the automatic chicken door in 10 minutes. Use the perforation template in the package to get the precise area to install the door, then you have got an easier ...

In between those moments you will not be able to immediately open or close the door. You can click the button to open or close, but the action won't be performed until the next check in. If you connect your Autodoor to a solar panel or any ...
