What is a power rail PV module mounting system?

The PV module mounting system engineered to reduce installation costs and provide maximum strength for parallel-to-roof, tilt up, or open structure mounting applications. The POWER RAIL mounting system is designed with the professional PV solar installer in mind.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

How do I specify a PV panel?

Specify PV panels and rail/rack systems that have UL 1703 and UL 2703 listing (as applicable), and an ICC AC 428 evaluation report. If the building is insured by FM Global, specify that the PV system have an FM 4478 approval. Specify double-nutting the panel clamp bolts. For the first nut, specify nuts that are furnished with T-bolts.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Do rooftop PV panels need to be designed for component and cladding loads?

International Code Council (ICC) International Building Code (ICC IBC) and International Residential Code (ICC IRC): The 2015 editions of the IBC and IRC require rooftop PV panel systems to be designed for component and cladding loads. However, the referenced criteria are not specific to PV systems.

Is mechanical design of a PV array within the scope of this document?

Mechanical design of the PV array is not within the scope of this document. BRE digest 489 'Wind loads on roof-based Photovoltaic systems', and BRE Digest 495 'Mechanical Installation of roof-mounted Photovoltaic systems', give guidance in this area.
