

Microgrid Power Generation Company

What is a microgrid generator?

What is a microgrid? Our range of diesel and natural gas generators are suited for all microgrid power generation requirements, ranging from 15 - 3,750 kVA. Advanced Microgrid Controls support multiple configurations and design implementation solutions to adapt to your evolving microgrid requirements.

What is the difference between a microgrid and a hybrid energy solution?

Microgrids are self-sufficient energy systems capable of generating their own power, traditionally via generator sets or turbines. Microgrids can operate independently or in conjunction with the electrical grid/utility. Hybrid energy solutions (HES) are microgrids that involve a combination of power sources.

Who supplied the battery energy storage system for the microgrid?

Duke Energy worked with the technology company Wärtsilä, who supplied the battery energy storage system for the project. The microgrid utilizes Wärtsilä's sophisticated energy management system, the GEMS Digital Energy Platform, for integrated control of both the solar and energy storage facilities.

What are the components of a microgrid?

Our solutions fully integrate all components of a microgrid, including diesel and natural gas generator sets, hydrogen technologies, renewable energy sources, battery storage systems, system level controls, transfer switches, and remote monitoring capabilities. What is a microgrid?

What is energy storage in a hybrid microgrid?

Energy storage systems are a key component in a hybrid microgrid and guarantee short-term backup power. Caterpillar can provide on-site energy storage systems to help stabilize transient loads, supply and absorb alternating current (AC) power, increase renewable energy source utilization, and transfer energy from time-of-generation to time-of-use.

Are microgrids a potential for a modernized electric infrastructure?

1. Introduction Electricity distribution networks globally are undergoing a transformation, driven by the emergence of new distributed energy resources (DERs), including microgrids (MGs). The MG is a promising potential for a modernized electric infrastructure ..
