Modify the telescopic solar bracket

How do I use a solar filter on a telescope?

I would suggest setting up the tripod so that the mount is pointing away from the Sun when you put the Solar filter on. The mount will then automatically rotate to find the Sun when it turns on. Likewise, you have to remember to point the telescope away from the Sun before you remove the Solar filter.

How does the Sky-Watcher SolarQuest solar tracking mount work?

The Sky-Watcher SolarQuest solar tracking mount is lightweight and easy to use. It automatically levels and calculates the azimuth and altitude of the sunusing its patented HelioFind solar finder and built-in GPS, eliminating the need to align your equipment beforehand.

How do I Reset my Telescope?

What you probably have to do is turn off the mount to stop tracking, then physically pick up the tripod with the optical tube attached to turn it away from the Sun before removing the Solar filter, otherwise you have to remove the telescope with the Solar filter attached. If the tracking is really far off, you can do a factory reset.

How does a telescope mount work?

The mount has a built-in sensor to locate the sun after obtaining the GPS location using a built-in GPS locator in the mount. There are no clutches so you want to try and know your balance point for your telescope. Once the mount is powered on it will locate a GPS signal for time and location. It will then auto level the scope.

How does the SolarQuest work?

Using its patented HelioFind solar finder and built-in GPS,SolarQuest automatically levels and calculates the azimuth and altitude of the Sunwith the single push of a button. Once self-aligned,the mount locates and tracks the Sun for hours at a time.

Does Sky-Watcher SolarQuest offer free ground shipping?

Free Ground Shipping! The Sky-Watcher Solar Quest solar tracking mount is lightweight and ridiculously easy to use. You don't need to worry about aligning your equipment the night before or early in the morning.
