Where can a ground-mounted solar panel be installed?

Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space - a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems.

Are ground-mounted solar panels a good alternative to rooftop solar?

Ground-mounted solar panels are a great alternative for customers who want solar - but don't have a roof that's suitable for them. On top of being an alternative to rooftop solar, ground-mounted solar systems can be used on farms, in your garden, and more!

Can you put solar panels on a roof?

Ground mounts are more common for certain types of solar systems, like off-grid setups. But they can be used by anyone if they have the space! There are other options if your roof isn't suitable for solar panels; you can also consider a solar carport, a solar patio, or even a solar tree!

Are ground-mounted solar panels better than a slanted roof?

The biggest advantage with ground-mounted solar panels is that they offer greater control over your solar panel direction and angle. Solar panels need to face either south or southwest to receive maximum direct sunlight. On flat ground, you can position solar panels in any direction you want to maximize sun exposure, unlike on a slanted roof.

What is a roof mounted solar system?
