

Where can I find a safety label for a solar photovoltaic system?

Greentech Renewables packages the most common safety labels, they are available here. This is an introductory article on permit and safety requirements for signage and labeling for solar photovoltaic systems.

Why are warning labels and signs important to PV systems?

Maintenance and repair workers rely on up-to-date and accurate labels to ensure their safety and help them work efficiently. We've established that warning labels and signs are important to PV systems. Now, we can explain where they belong.

What are the labeling requirements for photovoltaic (PV) systems?

The National Electrical Code (NEC) Section 690 outlines specific labeling requirements for photovoltaic (PV) systems to ensure safety and compliance. These requirements were updated in 2020. Visibility After Installation: Labels or markings must remain visible after installation, ensuring they can be easily read during maintenance or emergencies.

How do I know if my electrical equipment is safe?

Warning Signs: Labels with warnings such as "DANGER: HIGH VOLTAGE" should be clearly visible at all points where electrical equipment is present. These labels should comply with ANSI Z535.4 standards, which dictate the color, size, and wording of hazard labels. Disconnect Labels: All disconnect points should be clearly labeled.

Why is safety labeling important for solar installation?

Proper safety labeling is a critical aspect of solar installation safety, helping to prevent accidents and injuries by clearly communicating potential hazards. By adhering to established standards such as ANSI Z535, NFPA 70E, OSHA's HCS, and NEC 690, solar installers and operators can ensure their systems are safe for everyone involved.

What are the risks associated with a solar installation?

In addition to electrical and arc flash hazards, solar installations may pose other risks that need clear communication. Chemical Hazard Labels: If the installation involves batteries, labels must indicate the presence of hazardous chemicals such as sulfuric acid (in lead-acid batteries) or lithium compounds.
