

What is the parameter name & configurable value for a PV inverter?

The parameter name and the configurable value depend on the PV inverter and the communication product in use. In battery-backup systems, you operate the PV inverters with the locally typical country data set for grid-tie PV systems in accordance with UL1741.

How can I order a PV inverter with preset off-grid parameters?

You can order all the listed PV inverters with preset off-grid parameters from SMA Solar Technology AG. The PV inverters must be equipped with at least the firmware version given in the table, or a higher version. If this is not the case, perform a firmware update (see PV inverter documentation).

Can I use PV inverters in off-grid systems?

You can use the following PV inverters in off-grid systems. You can order all the listed PV inverters with preset off-grid parameters from SMA Solar Technology AG. The PV inverters must be equipped with at least the firmware version given in the table, or a higher version.

What is a PV inverter?

As clearly pointed out, the PV inverter stands for the most critical part of the entire PV system. Research efforts are now concerned with the enhancement of inverter life span and reliability. Improving the power efficiency target is already an open research topic, as well as power quality.

Can a PV inverter be set to stand-alone mode?

The country data set must be set to stand-alone mode in off-grid systems. You can order PV inverters configured for stand-alone mode or you can configure existing PV inverters for stand-alone mode (see Section 4 "Communication Products for Configuring PV Inverters", page 6).

What is the battery capacity of a PV inverter?

The battery capacity per installed kWp of the PV array must be at least 100 Ah. Example: In a PV array with 5 kWp, the battery capacity must be at least 500 Ah. To change grid-relevant parameters in the PV inverter after the first ten operating hours, you will need a special access code, the SMA Grid Guard code.
