What is the bolt strength of a roof purlin?

The bolt strength grade (4.6 or 8.8) should be specified by the design engineer to conform with the Stramit Purlins, Girts & Bridging - Product Technical Manual. Loads to be suspended from roof purlins must be accounted for in design. No allowance is included in the capacity tables.

How should a purlin flange be connected?

Any such loadings must be connected to the purlin web by using hangers or other means. Never attach loads to the purlin lips. Attachments to the purlin flange must be within 25mm of the web. Connection design should follow the rules within AS/NZS 4600, including a check on bearing of the purlin. Loads should not be suspended from wall girts.

Can Powers Super Purlins be used on other structures?

Although Powers Super Purlins were designed for use with our Carport and Ground Mount applications, they are also available as stand alone products for use with other structures. We do not provide engineering for these projects, but many of our clients have installed our Super Purlin system on other structures to great success.

What size bridging is required for a purlin roof?

Alternative hole sizes, shapes and centres are possible, subject to enquiry. Stramit recommends that bridging be installed such that the maximum unbraced length is $20 \times D$ (where D is the purlin web height), or 4000mm whichever is the least. In addition to enhancing purlin performance this requirement assists with the erection of roof sheeting.

Does Super purlin provide engineering?

We do not provide engineering for these projects, but many of our clients have installed our Super Purlin system on other structures to great success. Projects have included large supermarket parking structures and municipal parking lot roof tops.

Can a purlin bolt be used on a roof?

Bolting only the web of lapped purlins does not provide full structural integrity and excessive loads can be placed on the roofing screws that penetrate both purlin thickness in the lap region. The correct size and grade of purlin bolts nominated by the design engineer should be used at all times.

Solar Module Cell: The solar cell is a two-terminal device. One is positive (anode) and the other is negative (cathode). A solar cell arrangement is known as solar module or solar panel where ...

The Purlins are supported over the rafter. ... size of 50292 cells. The mesh type was the cut cell method.
