Should solar panels be oriented or tilted?

Proper orientation and tilt of solar panels are crucial for maximizing energy production, with south-facing panels and an optimal tilt angle being generally preferred.

Do solar panels have a tilt angle?

The tilt angle of solar panels should ideally align with the sun's path across the sky to maximize sunlight exposure. The roof pitch determines the initial angle which the panels are installed, and adjusting the tilt angle accordingly ensures that they receive sunlight more directly.

Which orientation is best for solar panels?

In the northern hemisphere, south-facing panels are usually the best choice, while in the southern hemisphere, north-facing panels are ideal. However, east and west-facing orientations can be suitable if you have specific energy production requirements or structural constraints.
