

Ship wind blade generator

What is a sailboat wind generator?

Sailboat wind generators are a way to capture the energy of the wind and use it to charge your batteries and power electronics aboard your vessel. A large part of the appeal of living on a sailboat, for many people, is being more or less self-sufficient - using the wind for propulsion, and the elements to generate all the power you need.

Can a wind generator mount on a sailboat?

A wind generator can mount in many ways on nearly any type of sailboat. It has a tiny footprint, unlike a large solar array. The bottom line is this--only add wind power when you have absolutely no space left for solar. If you're maxed out on solar, a wind generator can give you a little boost.

How do I choose a marine wind generator for my Boat?

The marine wind generator is, without a doubt, one of the most effective ways of charging your boat's batteries while you are away from the electricity grid. One of the most important things to take into account when selecting a marine wind generator for your boat is the installation process.

What is a marine wind generator?

A marine wind generator fills in those vital gaps in the energy picture, and eliminates the need to generate or run the engines to keep your electronics online. In this expert guide we take a deep dive into sailboat wind generators, covering everything you need to know - from how they work through to the very latest technological advances.

Should you use a wind generator on a cruising sailboat?

Since we're already using the wind to move us from place to place, it makes sense to use that same energy source to keep our batteries charged up and ready for action. Wind generators are increasingly becoming a standard feature on cruising sailboats, and a wide range of products have emerged to meet the demand.

How much power does a wind generator use?

Electromagnetic braking prevents potential damage from high winds and overcharging. You'll need 45 knots of wind to generate the full 2000 watts, but even at lower speeds, you'll be putting out enough power to keep your batteries topped up. Paired with a solar array, this wind generator will give you all you need for complete energy independence!

The main challenge confronting any wind generator is the fickle nature of wind itself. Wind generators present a Catch 22 scenario. While they are most effective when exposed to steady winds with the vessel at anchor, the ...
