What equipment do I need to go solar?

We'll break down everything you need to know about solar equipment to prepare you. You need solar panels, inverters, racking equipment, and performance monitoring equipment to go solar. You also might want an energy storage system (aka solar battery), especially if you live in an area that doesn't have net metering.

Is solar equipment a good choice?

Equipment earning a Good rating is a safe and solid choice for your solar energy system under most circumstances. This equipment is in the average range for most or all technical criteria analyzed, though it may offer a shorter-than-average warranty.

How does a solar energy monitoring system work?

This nifty piece of solar energy equipment reports the hourly electricity production of your solar system. In addition to being a fun way to watch your panels power your home, monitoring systems allow you to recognize potential performance issues and ensure maximum electricity production.

Do you need a solar battery for a power outage?

If you want your solar panels to operate during a power outage, you need to pair them with a solar battery. Hybrid solar systems and off-grid systems both use solar energy storage. However, off-grid systems require more batteries because they don't have the grid to fall back on like hybrid systems do.

How do solar panels work?

Solar panels are mounted on your roof then wired together, and the power generated flows into an inverter where direct current (DC) electricity is converted into alternating current (AC) electricity. This electricity is either used by your home or is exported to the utility grid.
