

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells,or photovoltaic cells. In such cells,a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

How does a solar cell make electricity?

This heat can be used to make steam. The steam can be used to make electricity in a power plant. Solar cells use the Sun's light rather than its heat. When the Sun shines on a solar cell, the cell turns the light energy into electricity. A single solar cell makes only a little electricity.

How does human ingenuity produce electricity?

Human ingenuity has developed two different ways how to harvest the energy of the sun and turn it into electricity: Solar thermal systems and Solar photovoltaic systemsA solar thermal system generates electricity indirectly by capturing the heat of the sun to produce steam, which runs a turbine that produces electricity.

How is solar radiation converted into electricity?

Solar radiation may be converted directly into electricity by solar cells(photovoltaic cells). In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors. (See photovoltaic effect.)

How does a solar thermal system produce electricity?

A solar thermal system generates electricity indirectly by capturing the heat of the sun to produce steam, which runs a turbine that produces electricity. A solar photovoltaic system produces electricity directly from the sun's light through a series of physical and chemical reactions known as the photovoltaic effect.

Is solar power the cheapest way to generate electricity?

If you are looking into options for making your house more eco-friendly and saving some money, solar power is probably one of the most attractive renewable energy options. In fact, solar power is becoming the cheapest way to generate electricity, according to Bloomberg New Energy Finance analysts.
