Can a solar system run an electric boiler?

A solar system is the perfect partner for an electric boiler, and the combination of heat storage and free energy from a photovoltaic system enables very low running costs. Our products are designed to integrate and work together seamlessly, in order to generate maximum system performance and energy savings for your application.

Can a solar system run a heating system?

However, the effectiveness and efficiency of running a heating system on solar power depend on your home's energy requirements, the size of the solar panel system, and the availability of sunlight. Incorporating a battery storage system can also help in utilizing solar power more effectively for heating.

How does active solar heating work?

Active solar heating systems use solar energy to heat a fluid-- either liquid or air -- and then transfer the solar heat directly to the interior space or to a storage system for later use. If the solar system cannot provide adequate space heating, an auxiliary or back-up system provides the additional heat.

How does solar heating work?

So, you'll still have heating and hot water when the power's out. Solar PV systems generate electricity that can be used to reduce the boiler's running costs, while solar thermal uses energy from the sun to heat water, providing domestic hot water and solar central heating system.

Can electric boilers be used with hydronic space heating systems?

Our electric boilers are designed to be used with hydronic space heating systems in low-temperature residential applications. When we refer to "hydronic space heating systems", we're talking about water heating systems that are used to heat your home, e.g. via hot water radiators or in-floor radiant heating.

Is a solar boiler a good investment?

Possible but not recommended unless the solar thermal system is relatively large. When comparing electric boilers, you'll notice that they all tend to be around the 99%-100% mark for efficiency - showing that very little heat is lost as they operate.
