What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

Are all solar generators the same?

Solar generators are portable power stations that combine batteries with one or more solar panels to provide electricity almost anywhere you need it. But, not all solar generators are created equal. They're not all meant for the same purpose, either. Each system has different energy storage capacities, output ports, and maximum power ratings.

How to choose a solar generator?

You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries. The pros of solar generators include free renewable energy, low maintenance costs, and clean and quiet operation, whereas the cons include limited power supply, high upfront price, and slow charge time.

Are solar generators portable?

Solar generators are available as both portable generators and backup home generators. Most solar generators are portable, lightweight, and have a built-in handle. The best portable solar generators are used to provide power for construction sites, campers, events, or other settings where access to electricity is limited.

What kind of batteries do solar power generators use?

Batteries used in solar power generator setups can be lithium-ion but are also often made with lead-acid technology. Both technologies can often be combined with other battery units through "chaining," - meaning you can add extra batteries onto your generator system for more robust storage capacity.
