

# Solar panels are easy

Are DIY solar panels a good idea?

DIY solar panel systems are best for constructing small off-grid systems to power a cabin, RV, boat, tiny home, etc. Solar panel kits are relatively inexpensive and include all the necessary components for a DIY solar installation, but you get what you pay for.

Are do-it-yourself solar panels worth it?

Solar panels are an appealing way to make your home more eco-friendly and reduce your monthly energy bills. However, they're expensive to install, with a large portion of the cost going toward labor. Do-it-yourself (DIY) solar panels have become increasingly popular as a result, but this is a complex project that requires knowledge and skill.

Is a DIY solar installation worth it?

Given a DIY solar installation will only save you 10%, the equipment alone can make hiring a solar installer worth it. Most homes with solar panel systems aren't "off-grid," even if they only use the electricity produced by their panels.

Can you install solar panels yourself?

Solar panel warranties are often not applied to DIY solar installations. Without the proper warranties, DIY setups require much more maintenance than those installed by a certified installer. You may be unable to connect to the utility grid if you install solar panels yourself.

Can whole-house solar panels be installed DIY?

Whole-house solar panel arrays cannot typically be installed DIY. In California, it's debatable whether a homeowner is required to use a licensed electrician for installation, but it is highly recommended.

Can solar energy systems be installed DIY?

Smaller solar energy systems that can power individual appliances can be installed DIY. Companies like Bluetti, Delta and Jackery make it easy to set up panels, use them to charge a solar generator with a built-in inverter, and then plug your appliances directly into the generator. DIY installation of solar energy systems is possible for smaller systems, but you may encounter issues in the future.
