Where can I find electrical characteristics of Canadian Solar crystalline silicon PV modules?

Detailed electrical and mechanical characteristics of Canadian Solar crystalline silicon PV modules can be found in Annex A (Module Specifications) on Main electrical characteristics at STC are also stated on each module label. Please refer to the datasheet or the product nameplate for the maximum system voltage.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement,builders should minimally specify an area of 50 square feetin order to operate the smallest grid-tied solar PV inverters on the market.

What are the requirements for solar panels on a low-slope roof?

Ballasted, unattached PV systems on low-slope roofs have to meet seven conditions to comply with seismic load requirements in Section 13.6.12. For low-profile systems, the height of the center of mass of any panel above the roof surface must be less than half the least spacing in plan of the panel supports, but in no case greater than 3 feet.

What wattage does a solar panel use?

"It's the combination of volts and amps that creates the highest wattage. "If you lower the current and increase the voltage,you move away from the maximum power point," he continues. Typically,solar panels are rated between 250 and 400 watts. Higher wattage generally means a system will be more efficient and require fewer modules.
