

# Solar photovoltaic power generation income in barren mountains

Can photovoltaic power stations be built on barren mountains?

Rows of photovoltaic panels installed over the hills provide unique scenery in Nianzhang township of Xiaxian county in Yuncheng city, Shanxi province. In recent years, the county has turned to constructing photovoltaic power stations on barren mountains as an important strategy for green and sustainable development.

Can solar photovoltaic projects help alleviate poverty in rural areas?

Nature Communications 11, Article number: 1969 (2020) Cite this article Since 2013, China has implemented a large-scale initiative to systematically deploy solar photovoltaic (PV) projects to alleviate poverty in rural areas.

Can photovoltaic energy resource endowments reduce poverty?

Of ten poverty alleviation measures, photovoltaic poverty alleviation is the one with main objectives to make use of regional solar energy resource endowments to increase income in residents (Yang and Zhao, 2018).

Can solar energy help alleviate poverty?

At present, poverty alleviation is an important global issue, and any country with relatively abundant solar energy resources can implement photovoltaic poverty alleviation projects.

Does photovoltaic technology reduce energy industry poverty?

Photovoltaic technologies played a leading role in energy industry poverty alleviation (Guo and Li, 2016); however, the current photovoltaic poverty alleviation strategy is a relatively new initiative.

Does utility-scale solar energy change land cover and protected areas?

Utility-scale solar energy (USSE) [i.e.,  $\geq 1$  megawatt (MW)] development requires large quantities of space and land; however, studies quantifying the effect of USSE on land cover change and protected areas are limited.
