

Solar power generation lease for 10 years

How long does a solar lease last?

The typical solar lease lasts around 20 years, but terms may vary between solar panel installation companies. Some companies offer leases for up to 25 years, which aligns with the average home solar panel life span. Your lease agreement will include panel maintenance and servicing terms for the length of your contract.

What is a solar lease?

You can think of a solar lease like a car lease - it's a form of third-party ownership (TPO) where you don't own the product that you're paying for. Under a solar lease, this third-party owner (e.g., a solar company) installs solar panels on your property and then sells you the electricity produced at a predetermined monthly rate.

How much does a solar lease cost?

Solar leases usually require zero up-front costs and only include monthly fees. However, these monthly fees may increase over time. Many lease contracts include escalator pricing that adds 1%-5% to your annual fees. For example, if you pay \$150 per month in your first year, it could increase by a minimum of 1% the following year.

What is the difference between a solar lease and a PPA?

These two financing options are very similar. The critical difference is that with a solar lease, you'll have a fixed monthly payment, whereas with a solar PPA, you'll purchase the power generated by your system at a fixed price per kilowatt-hour (kWh). What does that mean for you?

Should you lease or own a solar system?

Leasing a solar system usually provides less financial benefit in the long term than owning your system outright. Your monthly payments aren't paying down a loan balance, nor will you own the system when the lease ends. Since most of your payments go toward leasing fees, you'll have lower electric bill savings and a lower ROI.

How does solar leasing work?

Under this agreement, you make monthly lease payments and get full access to all solar power generated, which helps lower your utility bills. Solar leasing works best for homeowners who can't afford the high upfront costs of purchasing solar panels or the responsibility of ongoing maintenance.

Just as with a solar loan or a cash purchase, a solar lease will help you save 10-30% on electricity costs over its lifetime. This cost will vary depending on where you live and the incentives available to the third-party ...

If you sign a solar lease, you pay a flat monthly "rent" to Sunrun in exchange for electricity. If you sign a PPA, you commit to paying a fixed rate per kilowatt-hour (kWh) for the electricity your solar panels generate, which ...
