

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

What is the progress made in solar power generation by PV technology?

**Highlights** This paper reviews the progress made in solar power generation by PV technology. Performance of solar PV array is strongly dependent on operating conditions. Manufacturing cost of solar power is still high as compared to conventional power. **Abstract**

What has been done in solar power generation & application?

Substantial progress has been made in the area of solar power generation and application covering analysis, simulation, and hardware development and testing for efficiency maximization and cost minimization.

Is solar energy a good option for electricity generation?

Among renewable energy sources solar energy attract more attention and many studies have focused on using solar energy for electricity generation. Here, in this study, solar energy technologies are reviewed to find out the best option for electricity generation. Using solar energy to generate electricity can be done either directly and indirectly.

How a PV system can improve the performance of a solar panel?

Various demonstration plants in China, India, and elsewhere have been developed and are operational. Such type of systems helps in minimizing the PV panel surface temperature, reduce the water evaporation, enhance the panel life, and increase the power production. There have been countless efforts to improve the performance of PV systems.

Can solar power meet future US energy demand?

A comparative study of the potential contribution of solar electric power in form of photovoltaics to meet future US energy demand with the projected volume of oil estimated to be available in Arctic National Wildlife Refuge is presented by Byrne et al. .
