Do micro- and small enterprises have a grid connection in North India?

Micro- and small enterprise surveys from rural North India are analysed (N = 2,004). 34% of MSEs have no grid connection, despite complete village electrification. Variation in grid reliability did not explain connection rates nor low consumption. Electricity policy reform targeting productive use must consider wealth constraints.

Are microenterprise workers self-employed?

In India, Kenya, and Nigeria, microenterprises employ more than 90 percent of MSME workers, of whom some 90 percent are self-employed own-account workers and contributing family members. They face challenges of particularly low productivity. 17
