

# Street light solar bracket installation diagram

How to install solar panels & brackets?

Assembly of solar panels and brackets: Align the installation holes of the solar panels and brackets and tighten the screws. Pre-assembly of batteries: Place the batteries in the battery box, install the sealing ring, and thread the battery wires from the top cover wire outlet. Cover the top cover, align it with the holes, and tighten the screws.

How to install a solar street light?

To install the foundation of your solar street light, choose a level and flat ground, with no inclination. Screw and secure the Basis Cage to the ground using the four screws. One side of the Basis Cage should be parallel to the edge of the road. Secure the Basis Cage with concrete, and this will serve as the foundation of your street lamp.

How do solar street lights work?

Components of Solar Street Lights  
Solar Panels: The heart of the solar street light system, solar panels capture sunlight and convert it into electrical energy.  
Batteries: Store the energy generated by the solar panels to power the LED lights during the night.  
LED Lights: Energy-efficient lights that provide bright illumination.
