Does Utah have a floating solar system?

Utah Gets Its First Ever Floating Solar System...The Energy Department study, produced by the National Renewable Energy Laboratory, also noted that a layer of solar panels can reduce evaporation and inhibit algae growth, two important considerations for water treatment systems.

Are floating solar panels a sustainable solution?

Solutions that can support multiple sustainability goals related to clean energy, and resource use efficiency, will be crucial in the near future. The study estimates the potential of floating solar panels on reservoirs globally to generate renewable energy, reduce water losses and conserve land.

Could cities power themselves with solar panels floating atop water reservoirs?

Thousands of cities around the world could power themselves entirely with solar panels floating atop water reservoirs, according to new research. It's a relatively easy way to generate renewable energy locally while also conserving water. Solar arrays suspended over water, or floatovoltaics, work similarly to those spread out over land.

Are floating solar panels worth it?

Still, floating solar panels do have some downsides. They cost 25 percent more to install than systems on land, Sika Gadzanku, an energy technology and policy researcher at the National Renewable Energy Laboratory who peer reviewed the new paper, tells Bloomberg.
