

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

What are the different types of energy storage costs?

The cost categories used in the report extend across all energy storage technologies to allow ease of data comparison. Direct costs correspond to equipment capital and installation, while indirect costs include EPC fee and project development, which include permitting, preliminary engineering design, and the owner's engineer and financing costs.

Are energy storage systems cost estimates accurate?

The cost estimates provided in the report are not intended to be exact numbersbut reflect a representative cost based on ranges provided by various sources for the examined technologies. The analysis was done for energy storage systems (ESSs) across various power levels and energy-to-power ratios.

What is the minimum power required for energy storage?

Objective: To compare cost and performance of various energy storage technologies. Minimum system power = 500 kW. DC system (two or more columns provided if you have two different systems on offer). Active heat exchanger (HEX)?

How much do electric energy storage technologies cost?

Here, we construct experience curves to project future prices for 11 electrical energy storage technologies. We find that, regardless of technology, capital costs are on a trajectory towards US\$340 ± 60 kWh -1 for installed stationary systems and US\$175 ± 25 kWh -1 for battery packs once 1 TWh of capacity is installed for each technology.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering, procurement, and construction (EPC) costs can be estimated using the footprint or total volume and weight the battery energy storage system (BESS). For this report, volume was used as a proxy for these metrics.
