How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

What is solar energy used for?

This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating solar-thermal power technologies, electrical grid systems integration, and the non-hardware aspects (soft costs) of solar energy.

How does solar power work?

The sun--that power plant in the sky--bathes Earth in ample energy to fulfill all the world's power needs many times over. It doesn't give off carbon dioxide emissions. It won't run out. And it's free. So how on Earth can people turn this bounty of sunbeams into useful electricity?

How does a solar photovoltaic system generate electricity?

A solar photovoltaic system produces electricity directly from the sun's light through a series of physical and chemical reactions known as the photovoltaic effect. Let's examine each of these systems in more detail. How does solar thermal generate electricity? How do photovoltaic solar panels generate electricity?

What is solar power?

The Editors of Encyclopaedia Britannica This article was most recently revised and updated by Melissa Petruzzello. Solar power is a form of energy conversion in which sunlight is used to generate electricity.

How do solar cells generate electricity?

When photons hit the solar cells they create an electric field at the junction between the layers. This electric field knocks electrons loose from the atoms in solar cells, setting them in motion. The electrons flow through the solar cell and out of the junction, generating an electrical current.

The second technology is concentrating solar power, or CSP. It is used primarily in very large power plants and is not appropriate for residential use. This technology uses mirrors to reflect and concentrate sunlight onto receivers that ...
