

Using solar energy to generate electricity in the desert

Solar energy can contribute to the attainment of global climate mitigation goals by reducing reliance on fossil fuel energy. It is proposed that massive solar farms in the Sahara desert (e.g., 20% coverage) can produce ...

OverviewDescriptionFossil fuel consumptionEconomic impactPerformanceEnvironmental impactsIn popular cultureSee alsoThe Ivanpah Solar Electric Generating System is a concentrated solar thermal plant in the Mojave Desert. It is located at the base of Clark Mountain in California, across the state line from Primm, Nevada. The plant has a gross capacity of 392 megawatts (MW). It uses 173,500 heliostats, each with two mirrors focusing solar energy on boilers located on three 459 feet (140 m) tall solar power towers. Th...

Concentrated solar power uses lenses or mirrors to focus the sun's energy in one spot, which becomes incredibly hot. This heat then generates electricity through conventional steam turbines. Some systems use molten salt ...

Researchers imagine it might be possible to transform the world's largest desert, the Sahara, into a giant solar farm, capable of meeting four times the world's current energy demand. Blueprints have been drawn up for ...

Solar power plants use the energy from the sun to convert it into electricity, ... (SEGS) in the Mojave Desert, California, is one of these power plants. The first plant, SEGS 1, was built in 1984

US annual average solar energy received by a latitude tilt photovoltaic cell (modeled). Sketch of a Parabolic Trough Collector system. The Southwestern United States is one of the world's best areas for insolation, and the Mojave ...

Deep in the Nevada desert, halfway between Las Vegas and Reno, a lone white tower stands 195 meters tall, gleaming like a beacon. ... use this technology with concentrated solar power to generate ...
