

Which companies have energy storage fire protection systems

Does Siemens offer a fire protection concept for lithium-ion battery energy storage?

Siemens stands out as the only supplier offering a VdS-certified fire protection concept for Li-ion battery energy storage. Siemens offers as the only supplier a VdS-certified fire protection concept for lithium-ion (Li-ion) battery storage systems and uninterruptible power supply.

Can a battery energy storage system control electrical fires?

However, these systems may be used in the computer or control rooms of an ESS to control any electrical fires. Thermal runaway in lithium batteries results in an uncontrollable rise in temperature and propagation of extreme fire hazards within a battery energy storage system (BESS).

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.*Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

Why are energy storage systems important?

Energy demand is rising, driving the increased adoption of energy storage systems. These systems are essential for uninterruptible power supplies and play a crucial role in stabilizing grid fluctuations through load balancing. Siemens stands out as the only supplier offering a VdS-certified fire protection concept for Li-ion battery energy storage.

Are battery energy storage systems safe?

Owners of energy storage need to be sure that they can deploy systems safely. Over a recent 18-month period ending in early 2020, over two dozen large-scale battery energy storage sites around the world had experienced failures that resulted in destructive fires. In total, more than 180 MWh were involved in the fires.
