

Wind Boy Power Generation Device

What is a 'Windy Boy' system?

A commissioning procedure was developed by Wind & Sun with Yorkshire Electricity to address the concerns of their engineers and allow them to accept the wind turbine connection following the G77 grid connection guidelines. The new 'Windy Boy' system means that small-scale wind power is now a viable option for many more properties.

How does the Windy Boy work?

The Windy Boy converts the energy from the wind generator into grid conforming alternating current. And then it feeds this into a public utility grid or an autonomous stand-alone grid. Additionally the inverter is extraordinarily flexible: various device types cover the power range of 1,000 to 6,000 W.

What is a Windy Boy inverter?

Windy Boy inverters combine the same proven technology present in all Sunny Boy inverters with special firmware that permits direct grid-tied operation with a broad range of wind turbines without batteries.

What is a transformer-free Windy Boy?

With modern graphic displays, a simplified assembly concept, and cable-free plant communication using the Bluetooth global standard: the new generation of devices are ideally suited to almost every need. The transformer-free Windy Boy 3600TL and 5000TL feature a peak efficiency of 97 percent for optimal yields from small wind energy plants.

What is a Windy Boy 1100lv?

The Windy Boy 1100LV is the perfect solution for the smallest wind power systems: turbines with a nominal voltage of 24 or 48 V can be connected without an additional voltage converter.

What is a Windy Boy 2500 and 3000?

The Windy Boy 2500 and 3000 are ideal for small wind energy plants: with more than 10,000 units, they are successfully in use worldwide. They feature a maximum efficiency of 95 %. The programmable polynomial curve enables an optimal adjustment to the characteristic curve of the turbine, which is also protected by a special smooth start device.
