Can solar panels be installed on a south-facing roof?

For homes in the Northern Hemisphere, a shade-free, south-facing roof with solar panels placed at a 30-degree tilt is ideal for production. This is not to say that having a roof that is partially shaded, or east- or west-facing, puts a solar PV system out of the question.

How are solar panels affixed to my property?

Your solar array will be affixed to your property using racking and mounting systems. Rooftop solar panel systems will have a fixed mount system, keeping the panels stationary on your roof. All rooftop mounting systems serve the same functional purpose but can differ in how they're installed.

How do I determine my home's solar rooftop potential?

Determine your home's solar potential. Aside from your roof's condition, your home's solar rooftop potential depends on your geographic location, the position of your home in relation to the sun, how much shade you have, and the PV system you and your installer choose.

How do solar panels connect to a roof?

In short, the solar panels connect to a roof-mounted frame. The solar panels sit on the frame and are clamped with either a bolt, bracket, or other clamping devices. If you are using a kit, the clamps will match the frame making it easy to secure the panels to the roof.

Do rooftop solar panels have a fixed mount system?

Rooftop solar panel systems will have a fixed mount system, keeping the panels stationary on your roof. All rooftop mounting systems serve the same functional purpose but can differ in how they're installed. Most racking is standard "penetrating" rooftop racking, which means holes will be drilled into your roof to fasten the mounting system.

Are slanting panel frames a good choice for a roof?

Flat or slightly sloping roofs are also perfect when they have slanting panel frames installed on them. It does not matter if you have enough space; rather you need open contiguous areas with no multiple roof levels, chimneys, vents and other obstructions that could cause shades.
