What is photovoltaics & how does it work?

Photovoltaics is a process in which light is converted into electrical energy. This is done in a solar cell-powered photovoltaic module, which consists of a number of solar cells. The electrical energy generated by the conversion of light into electrical energy can be used to power electrical devices.

How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m²/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules.
